Task 2: 24 April 2026

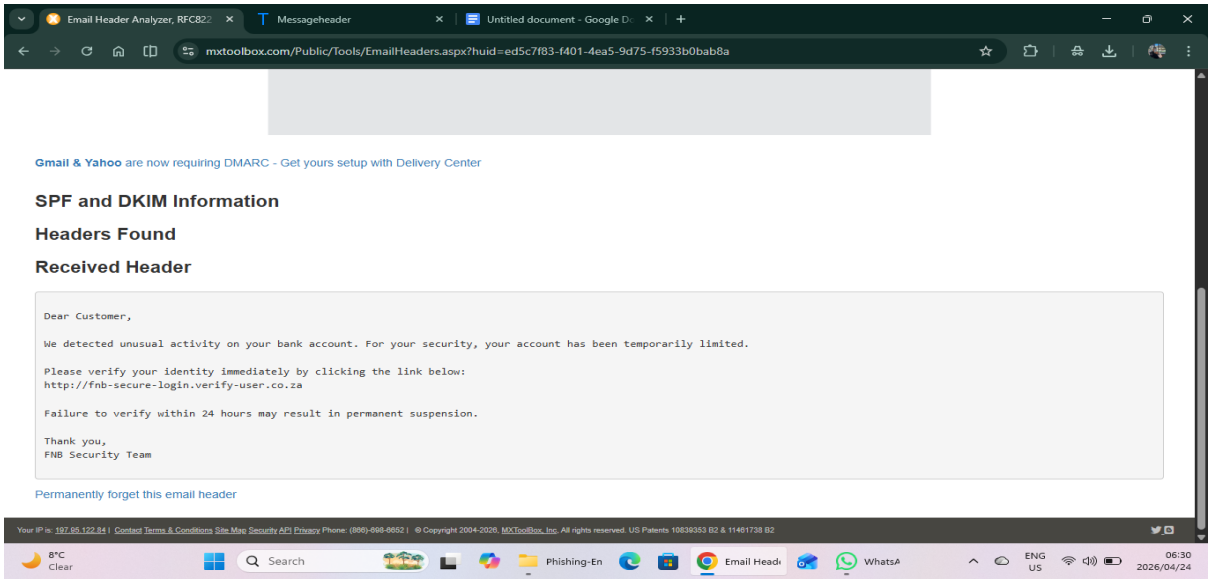
Report 1: Phishing Email (Fake Bank Alert)

Introduction: What is Phishing and why is it dangerous

Phishing is a type of cyberattack where criminals trick you into giving them sensitive information like passwords, credit card numbers, or bank details by pretending to be a trustworthy person or organization. Phishing is dangerous because it targets people—the "weakest link" in security and is highly effective at bypassing technology defenses.

Email Analyis:

Email:



Subject: Urgent: Unusual Activity Detected on Your Account

Sender: support@fnb-secure-alerts.com

Findings:

1. The URL is wrong, FNB's real site is fnb.co.za. The link uses fnb-secure-login.verify-user.co.za which is a fake domain, made to look legit
2. Urgency & Threats "24 hours or permanent suspension" is a classic scammer pressure to make you act without thinking
3. Lastly, Genetic Greeting. Real FNB emails use your name and last 4 digits of your account, not "Dear Customer"

Risk Level: Phishing

Explanation: This email tries to scare the user

How the attack works: The attacker pretends to be a bank and creates urgency by claiming suspicious activity.

Prevention Tips:

1. Check sender's email domain carefully
2. Do not click on links in urgent emails
3. Visit the official bank website directly

Do's and Don'ts:

Do:

1. Report suspicious emails to IT/Security
2. Verify requests through official channels

Don't:

1. Click Unknown link
2. Enter login details via email links

Task 2: 24 April 2026

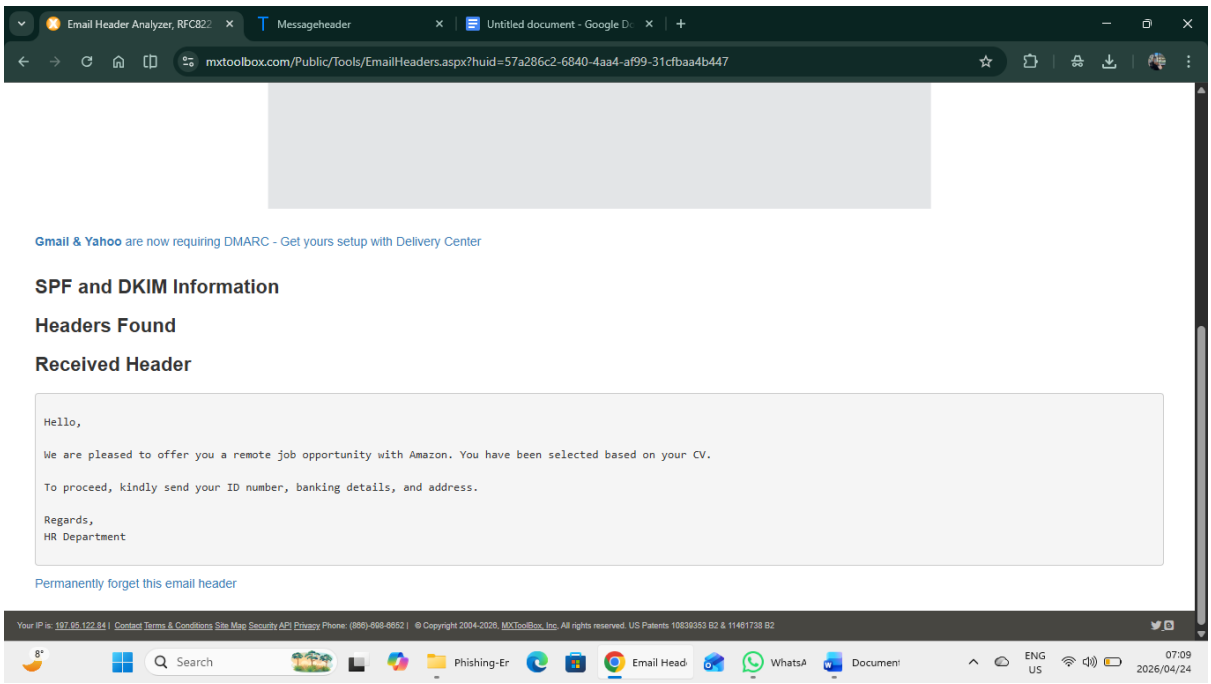
Report 1: Phishing Email (Job Offer Scam)

Introduction: What is Phishing and why is it dangerous

Phishing is a type of cyberattack where criminals trick you into giving them sensitive information like passwords, credit card numbers, or bank details by pretending to be a trustworthy person or organization. Phishing is dangerous because it targets people—the "weakest link" in security and is highly effective at bypassing technology defenses.

Email Analyis:

Email:



Subject: Job Opportunity: Immediate Hiring

Sender: hr@amazon-careers-job.netFindings:

Findings:

1. Requests sensitive info (ID + banking details)
2. Suspicious domain (amazon-careers-job.net)
3. No formal hiring process

Risk level: Phishing

Explanation: The attacker offers a fake job and tricks the victim into sending personal and banking details, which are then used for fraud or identity theft.

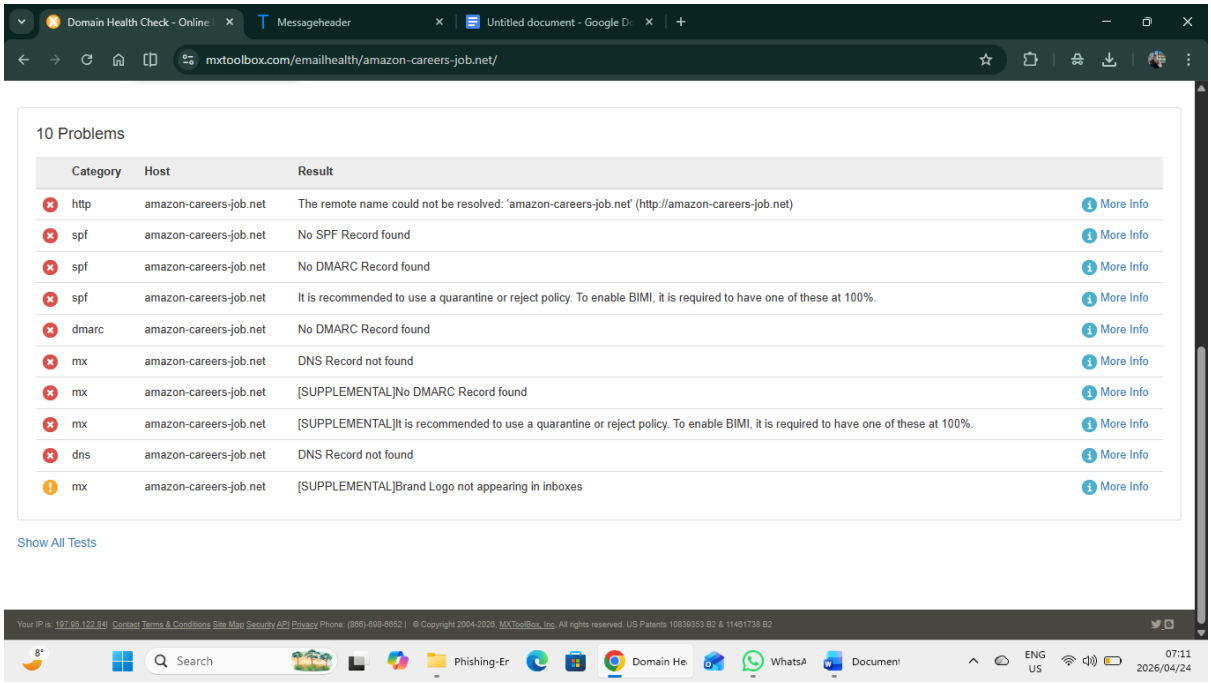
Prevention Tips:

1. Never share sensitive info via email
2. Verify job offers on official company websites

Do's and Don'ts:

Do:

1. Verify recruiters via LinkedIn/company site
2. Report suspicious offers

Don't:


1. Send ID or banking info via email
2. Trust unsolicited job offers
